I respectfully urge the FCC to reject the National Association of Broadcasters petition 04-160. XM and other satellite radio providers provide a valuable, reasonably priced product to the public. I have personally benefitted from their up-to-the-minute traffic and weather reports in several East Coast Metro areas. This product is not available anywhere else. FM and AM radio do not provide a product that remotely meets public requirements in this area. I do pay for these services and would like to see even more competition improving satellite Radio.
